

## Node.JS

### Ex1 – High Order Functions

1. You have the following list :  
["Yaron", "Dov", "Gilat", "Dana"]

User map, filter & reduce to calculate the total length of the names with more than 4 chars

2. You have the following list :  
[{"name": "Avi", age: 20}, {"name": "Ron", age: 30}, {"name": "Dana", age: 25}]

- Print the names of those who are 22-32 years old
- Get their names length

3. You have the following array of arrays : [[1, 6, 3, 9], [6, 12, 5, 21], [4, 11, 23, 1]]  
Calculate the total sum of the numbers. Use forEach only.
